

Patient: Tom

Male patient 30s cyclist in a road traffic collision resulting in a critical leg injury, hospital stay resulting in admission to ITU where patient is intubated. Treatment and rehabilitation needed including SALT referral. Support brace for injured leg recovery and physiotherapy to aid in recovering full mobility. Follow up with OT in regards to home rehabilitation once discharged.

Patient: Jade

Female 23 weeks pregnant with a previous history of pre-term labour is involved in a collision (low impact) where she sustains minimal injuries (back ache, neck pain). Already has a cerclage in situ to prevent pre-term labour as she had a history in this pregnancy of a shortening cervix. CTG monitoring, a USS to determine fetal wellbeing, a fibronectin test and a consultant review. Osteopath referral made to help with back and neck pain.
